

■ Features

- Emission wavelength: 7.73 μm (Typ.)
- Output power: 20 mW (Min.)
- Threshold current: 1.0 A (Max.)

■ Applications

- Trace gas analysis (CH_4)

■ Outline

Quantum Cascade Lasers, using structures of SPC (Single Phonon-Continuum) depopulation and DFB (Distributed Feedback), emit CW (Continuous Wave) mid-IR laser under room temperature.

By controlling the chip's operating temperature through the Peltier element installed in the HHL package, it is possible to tune the emission wavelength without mode hopping while keeping longitudinal single mode operation.

■ Absolute and characteristics

$T_{\text{op}(qcl)} = +20\text{ }^{\circ}\text{C}$, unless otherwise specified.

Forward voltage *1	V_f		V
Reverse voltage *1	V_r	0.0	V
Change speed of forward current *3	—	5	mA/s
TEC current (cooling mode) *4	I_c	+3.7	A

Storage temperature *5	T_{stg}	-20 to +65	$^{\circ}\text{C}$

*1 Confirm data sheet attached to a product. Sensitive to electrical surges and instability. Reverse current/voltage cause damage in laser specifications and out of warranty.

*2 Necessary specifications of power supply: $I_f \geq 1.3\text{ A}$, $V_f \geq 16\text{ V}$.

*3 Speed when changing the forward current (I_f).

*4 Even if TEC current (I_c) is below the absolute maximum, insufficient heat dissipation from this product may cause damage in laser and TEC specifications and out of warranty. Especially there are possibilities of damage, degradation and less reliability when TEC is operated in heating mode since heated-up side (laser chip) is thermally isolated from case of package and ambience. Refer to schematic configuration in 3-2-4.

*5 Avoid water condensation.

*6 Temperatures of case (body) of HHL-package.

*7 Temperatures of QC-laser when operated; should be monitored by the built-in thermistor for $T_{\text{op}(qcl)}$.

*8 Speed when changing the operation temperature ($T_{\text{op}(qcl)}$) controlled by the built-in TEC.
