### C mount

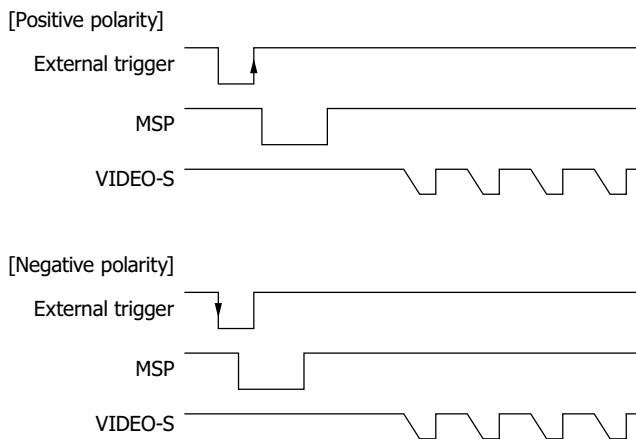

C mount lens can be attached using the C mount holder included with the product.

### Imaging mode

There are two imaging modes: internal trigger mode in which the image sensor module operates by itself and external trigger mode in which the exposure timing can be set using external triggers.

### Timing chart (external trigger mode)

Delay time from when an external trigger is input to when exposure is started=30 ns  
 Jitter=±10 ns  
 Minimum pulse width of external triggers=100 ns

### Connection example

A USB 3.1 Gen 1 interface is required on the PC. Connect to the PC using the USB 3.1 cable, and install the driver software in the PC. The digital controller runs on the bus power through the USB 3.1 cable. When the digital controller starts, the power supply input from the AC adapter turns on. Power is supplied to the analog front end and temperature controller from the AC adapter. Connect an external trigger generator to TRIG IN using an SMA coaxial cable to use external trigger mode. Apply an LVTTTL level input (3.3 V) signal.
