Mini-spectrometers

We have more than 20 different mini-spectrometers for the ultraviolet to near infrared regions.

What are mini-spectrometers?

Mini-spectrometers are small spectrometers (polychromators) with an integrated optical system, image sensor, and driver circuit. They are portable devices that make them possible to do real-time measurement on-site.

Applications

· Color measurement
· Sugar content measurement
· Film thickness measurement
· Plastic screening
· Fluorescence measurement
· Environmental analysis
· Mobile measuring devices
● Example of mini-spectrometer optical system

Focus lens
Transmission grating
Collimating lens
Image sensor
Input slit
KACCC0256EA

Ultra-small spectrometer heads (without a driver circuit) are also available.

Table　Optical system

Optical system in the compact spectrometer heads

In the C12666MA, C12880MA, and C16767MA, we use a CMOS image sensor with a slit integrated by etching, and a reflective concave grating made by nanoimprint.
C12666MA, C12880MA, C16767MA
KACCC1035EB

The metal package provides high humidity resistance. Low cost is achieved because it is a hollow type.

C11708MA

KACCC0922EC

The glass used does not expand easily with rising temperatures, so the temperature dependency of the wavelength is extremely small.

Mini-spectrometer

Application examples

Mini-spectrometers can be incorporated into a variety of devices and are used in a wide range of applications.

Color measurement (e.g., LED light source)

Mini-spectrometer

LED light source and the like

KACCC0796EA

A mini-spectrometer is used to perform spectral measurement and inspect LEDs or the like.

Display color measurement

Mini-spectrometer

LCD display

KACCC0599EC

The emission spectrum of LCDs is monitored with a micro-spectrometer.

Sugar content measurement

Mini-spectrometer

KACCC0797EA

Absorbance is used in applications such as handy brix meters, which measure sugar content.

Film thickness measurement
Mini-spectrometer

KACCC0600EB

White light interferometry is used to measure the spectrum peak count, film refractive index, and film thickness from the light incident angle.

Plastic screening

Photosensitive area

Mini-spectrometer

Near infrared light

Air nozzle

KACCC0601EB

Plastic screening is performed by using the fact that when near infrared light is directed at plastic, the wavelengths that are absorbed varies depending on the material.

Environmental analysis

KACCC0798EB

Mini-spectrometers are used in environmental analysis of water, soil, and the like.

For mini-spectrometers

Accessories

We offer accessories for mini-spectrometers (sold separately).

Input optical fibers A16962 series, A16963 series

UV/visible optical fiber (UV resistant) and visible/NIR optical fiber are available. Note that the fiber is incorporated in the mini-spectrometers C11009MA and C11010MA.
Type no.	Product name	Core diameter (µm)	Minimum bend radius (mm)	Specification
A16962-01	Ultraviolet/visible optical fiber (UV resistant)	600	132	NA=0.22 1.5 m in length, with SMA905D connector on each end Operating temperature: 0 to +60 °C Storage temperature: -10 to +70 °C
A16962-02		800	176	
A16963-01	Visible/near infrared optical fiber	600	132	
A16963-02		800	176	

External trigger coaxial cables A10670, A12763

Cable	Applicable mini-spectrometers	Length (m)

2 W xenon flash lamp modules L13651 series

These lamp modules integrate a 2 W xenon flash lamp with a power supply and trigger socket, and are designed to extract maximum performance from the lamp.

Features	· Compact: 42 × 42 × 37 mm · Operates on 5 V mobile battery · Long life: 1×10^9 flash	· Repetition rate: 1250 Hz max. · Broad spectrum: UV region to middle IR region

Note: We offer a catalog of xenon flash lamps.

What is an FTIR engine?

Compact FT-NIR spectroscopic module that can be incorporated into portable analytical instruments

The Fourier transform infrared spectrometer (FTIR) engine is compact enough to carry in just one hand. A Michelson optical interferometer and control circuit are built into a palm-sized case. Spectrum and absorbance can be measured by connecting a PC via USB.

Features

· Compact: palm size
· Optical fiber incident type
· High S/N
  Suitable for diffusion reflection measurement and absorbance measurement
· Spectral response range: 1100 to 2500 nm
· Real-time measurement on-site

Applications

· Process analysis
· Material inspection
· Farm product inspection
· Plastic screening
· Concrete strength measurement
· Film thickness measurement
· Medical and health care equipment

What are MEMS-FPI spectrum sensors?

Ultra-compact near infrared spectrum sensors that integrate MEMS-FPI tunable filter and photosensor

The MEMS-FPI spectrum sensor is an ultra compact sensor, containing an InGaAs PIN photodiode and an MEMS-FPI (Fabry-Perot Interferometer) tunable filter that is capable of changing the transmission wavelength by changing the applied voltage, all in one package.

MEMS-FPI tunable filter cross section

By applying voltage between the upper mirror and lower mirror of the MEMS-FPI tunable filter, it is possible to adjust the air gap by electrostatic attractive force, and change the transmission wavelength.

Lineup

We offer several types with different spectral response ranges.

Features

· Built-in Hamamatsu InGaAs PIN photodiode single device chip
· Ultra-compact: TO-5 package
· Ultra-lightweight: 1 g
· Hermetically sealed package: High reliability in high humidity environment
· Built-in thermistor
· Built-in band-pass filter for cutting off wavelengths outside the spectral response range

Applications

· Moisture detection
· Food inspection
· Farm product inspection
· Plastic screening
· Textile identification
· Installation into mobile measuring devices
