

Signal processing unit for PSD module

C10460

Specifically dedicated for PSD module

The C10460 is a signal processing unit specifically design to convert the output from a PSD module C10443 series (except for the C10443-06) into position signals.

Position signals are output as both analog and digital signals. In case of analog output, connecting the output connector to a voltmeter shows an output voltage that directly represents the position information (The output voltage indicates a position from the center of the PSD, 1 V=1 mm). While, digital output allows serial connection (RS-232C) to a PC. Position information can be easily loaded into a PC via the sample software that comes with the unit.

Features

- **Both analog and digital outputs**
Analog output: Output voltage directly represents the position information.
Digital output: High-resolution digital output (16-bit)
- **AC adapter (+12 V) operation**
- **Supplies power to PSD modules**

Applications

- **Optical axis alignment**
- **Range finder**
- **Two-dimensional measurement**
- **Three-dimensional measurement**
- **Length measurement**
- **Liquid level sensors**
- **Distortion measurement**
- **Displacement sensors**

Absolute maximum ratings (Ta=25 °C unless otherwise noted)

Parameter	Symbol	Min.	Max.	Unit
Supply voltage	Vcc	-	+18	V
Input voltage	Vin	-13	+13	V
Output voltage	Vout	-15	+15	V
Operating temperature*1	Topr	0	+40	°C
Storage temperature*1	Tstg	-10	+60	°C

*1: No dew condensation

When there is a temperature difference between a product and the surrounding area in high humidity environment, dew condensation may occur on the product surface. Dew condensation on the product may cause deterioration in characteristics and reliability.

Note: Exceeding the absolute maximum ratings even momentarily may cause a drop in product quality. Always be sure to use the product within the absolute maximum ratings.
