The C13560 spectroscopic module is a ultra-compact Raman spectroscopic module that incorporates a mini-spectrometer, compact optical system, and other Hamamatsu original technologies. The dedicated SERS substrate J13856-01 is used to perform Raman spectroscopy. It is also possible to perform Raman spectroscopy without using the J13856-01. It can be used for simple onsite point-of-care testing (POCT) and other screening tests.

Features
- Built-in laser, spectrometer, and driver circuit
- Ultra-compact and lightweight
- Low power consumption
- High-sensitivity measurements using a SERS substrate

Applications
- Environment (water quality inspection, agricultural and toxic substance inspection, etc.)
- Safety control (foreign matter checking in foods and medicine and the like)

*2: Can be changed with the sample software
**Example of Raman measurements using SERS or Si substrate**

- On SERS substrate: 4,4’ bipyridyl aqueous solution 10 µM
- On Si substrate: 4,4’ bipyridyl aqueous solution 1 mM

Integration time: 1 s, average count: 10
- When using SERS substrate: Laser intensity: 5 mW
- When using Si substrate: Laser intensity: 15 mW

**Example of Raman measurements of polystyrene board (SERS substrate not used)**

Integration time: 1 s, average count: once
- Laser intensity: 15 mW

SERS substrate

Sample software (accessory)

By installing the sample software (C13560_OperationSoftware)*3 into a PC, you can perform the following basic operations.

- Acquire and save measured data
- Set measurement conditions
- Display graphs
- Arithmetic functions
  - Wave number calibration
  - Dark subtraction
  - Peak search
  - Gaussian fitting
  - Lorentz fitting
  - Baseline collection

*3: Compatible OS
  - Microsoft® Windows® 7 (32-bit, 64-bit)
  - Microsoft Windows 8.1 (32-bit, 64-bit)
  - Microsoft Windows 10 (32-bit, 64-bit)

A DLL for controlling the hardware is available.

Users can develop original measurement programs using the following development platform.

Microsoft Visual Studio® 2008 (SP1) Visual C++®
Microsoft Visual Studio 2008 (SP1) Visual Basic®

Note: Microsoft, Windows, Visual Studio, Visual C++, and Visual Basic are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
- **Dimensional outline (unit: mm)**

  ![Dimensional outline diagram]

  - SERS substrate holder: 16 mm
  - Module: 80.0 mm

  Tolerance unless otherwise noted: ±0.5

  Note: With the SERS substrate holder and module close together

- **Accessories**
  - CD-ROM (sample software*)
  - USB cable
  - Si substrate for calibration

  *4: Software development materials can be provided.

- **Safety measures of laser products**

  This product is a class 3B laser product designed to be embedded in a device. As such, shutters, interlocks, and other requirements defined in JIS C 6802: 2014 are not met. Be very careful in handling this product.

  During use, be sure to provide the safety measures described in JIS C 6802: 2014 (Radiation Safety Standards for Laser Products).
SERS substrate J13856-01 (sold separately)

A surface-enhanced Raman spectroscopy (SERS) substrate enhances the Raman scattered light from the molecules, making high-sensitivity Raman spectroscopic analysis possible. A fine metal structure (chip) is mounted on Hamamatsu original handling plate to protect the active area. The active area of the handling plate has a well structure for easy attaching solution or the like. Note that this is a disposable product and cannot be reused.

Parameter Speciﬁcation Unit
Substrate size 10 × 2.5 × 25 mm
Chip size 4 × 4 mm
Active area ϕ3.0 mm
Activated surface structure Metal nanostructure -
Handling plate material Polypropylene -
Raman excitation wavelength (recommended) 785 nm

Note: This is a disposable product and cannot be reused.

The J13856-01 is a product for customers that have purchased the C13560.
