MPPC® (Multi-Pixel Photon Counter)

S14420 series

Visible/near infrared MPPC

MPPC is a type of device called SiPM (silicon photomultipliers). It is a new type of photon counting device that consists of multiple Geiger mode APD (avalanche photodiode) pixels. It is an opto-semiconductor with outstanding photon counting capability and low operating voltage and is immune to the effects of magnetic fields.

The S14420 series is an MPPC for the visible to near infrared region. It provides higher photon detection efficiency than the previous product (S13360 series) in the visible to near infrared region.

Features

- High photon detection efficiency: 40% (λ=600 nm, Vop=VBR + 5)
- Low crosstalk, low afterpulses
- Low voltage (VBR=42 V typ.) operation
- High gain: 10^5 to 10^6
- Operates with simple readout circuits
- MPPC module also available (sold separately)

Applications

- Flow cytometry
- Laser scan microscope
- Fluorescence measurement

### Connection example

![Connection diagram](image-url)

- **MPPC (Multi-Pixel Photon Counter)**
- **S14420 series**
Photon detection efficiency vs. wavelength (typical example)

Photon detection efficiency does not include crosstalk or afterpulses.

Gain, crosstalk probability, photon detection efficiency-overvoltage characteristics (typical example)
MPPC characteristics vary with the operating voltage. Although increasing the operating voltage improves the photon detection efficiency and time resolution, it also increases the dark count and crosstalk at the same time, so an optimum operating voltage must be selected to match the application.

Evalution circuit for MPPC: C14450

The C14450 is a simple evaluation starter kit for non-cooled visible/near infrared MPPC. MPPC evaluation is possible by mounting an MPPC in the socket of the sensor circuit board. Various types of MPPCs can be evaluated. The power supply circuit board is equipped with the C11204-01, a high-accuracy, high-voltage power supply that provides the operating voltage for MPPCs. It operates just by connecting to an external power supply (±5 V). It is also equipped with a USB interface that can be used to set the operating voltage and temperature compensation coefficient from a PC running the supplied sample software.

Features

- Enables the evaluation of non-cooled visible/near infrared MPPCs
- Sensor circuit board with a socket for mounting an MPPC with leads
- Equipped with a high-accuracy, high-voltage C11204-01 power supply
- Adjustable operating voltage and temperature compensation coefficient
- Selectable amplifier usage (the default condition is use)
- Built-in pole-zero cancellation (PZC) circuit (Initial condition: set to a PZC constant appropriate for the S14420-3050MG)
- Analog output

Note: MPPC is sold separately.

Applications

Simple initial evaluation of MPPCs
